

## ***Assignment –2***

### **1. Which field of the Customers table is the primary key?**

->In a properly designed database, the primary key of the customers table should be Cnum (Customer Number).

But in your screenshot, Cnum values are repeated (2002 and 2008 appear twice).

So strictly speaking, in this version of the table, Cnum is not acting as a proper primary key.

If we fix duplicates, Cnum would be the Primary Key.

### **2. What is the 4th column of the Customers table?**

->Rating

### **3. What is another word for row? For column?**

->Row-Tuple/Record

column->Attribute/Field

### **4. Why isn't it possible to see the first five rows of a table?**

->It's not possible because SQL tables do not have a default order, and SQL always retrieves the full set unless you restrict it with LIMIT.

SELECT \*

FROM Employees

ORDER BY EmployeeID ASC

LIMIT 5;
